Sample Practice Question and Solution

Question:

A random sample of 50 students at a university found that 30 of them prefer online classes over in-person classes. Construct a 95% confidence interval for the proportion of all students who prefer online classes. Interpret your interval.

Solution:

- Identify sample proportion (p?):

p? = 30/50 = 0.6

- Calculate standard error (SE):

SE = ?[p?(1 - p?)/n] = ?[0.6 0.4 / 50] ? ?[0.24 / 50] ? ?0.0048 ? 0.0693

- Find the z-value for 95% confidence:

z ? 1.96

- Calculate the margin of error (ME):

ME = z SE = 1.96 0.0693 ? 0.136

- Construct the confidence interval:

Lower bound = p? - ME = 0.6 - 0.136 = 0.464

Upper bound = p? + ME = 0.6 + 0.136 = 0.736

Result: The 95% confidence interval for the proportion of students who prefer online classes is approximately (0.464, 0.736).

Interpretation:

We are 95% confident that between 46.4% and 73.6% of all students at the university prefer online classes over in-person classes.
